Mixing other colours

Please note that mixing with Craig's Brilliant White and Craig's Mirror Black needs to be done at the time of application and not mixed and left for long periods of time before use.

This is advised due to the effect mixing these products has on long term stability.

All sample prints in this guide were made on black and white card, to indicate the opacity of each product and mix.

The volumes of each product mentioned in the guide, are indicative values . For exact volumes to meet individual job's needs, apply the given ratios to the volume required
